

## Safety and eco-friendliness

It proved that the STONIA® is an absolutely safe material for human health as well as the natural environment. The first has a low VOC content, ie volatile organic compounds such as benzene, toluene, methane, harmful to health. Moreover, the is an inert chemical material, that does not produce emissions, for this is highly salutary. As for the colors of STONIA®, they are all approved by the US Food and Drug Administration, being devoid of toxic ingredients, heavy metals and elements carcinogenic.
